DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hogdahl et al (US. PAT. NO. 5,264,992 hereinafter Hogdahl) in view of Klein et al (US. PUB. NO. 2002/0190956 hereinafter Klein).

As to claim 1, Hogdahl discloses a portable information terminal (Figs. 1-4) comprising: an upper section (front section as shown in Fig. 5A) provided with a display screen (LCD 60) displaying information; a detector (digitizer 62) detecting, when a position on the display screen is pointed, the position and outputting a position signal; a decoder circuitry (68) generate position signals from the digitizer and outputting the position signals (col. 5, lines 26-43; col. 6, lines 1-2);

a lower section (rear section 46 as shown in Fig. 5B) provided with a processing section (motherboard 124, and col. 10, lines 53-54) receiving the signals output from the decoder circuitry, recognizing the position and processing information displayed on the display screen according to the recognized position (col. 5, lines 40-43).

Art Unit: 2674

Hogdahl does not explicitly disclose the decoder circuitry having a converter for converting the position signal output from the digitizer to a digital signal. However, Fig. 3 of Klein teaches a portable device having a touch panel (digitizer), a decoder circuitry (170) having an ADC converter for converting the position signal output from the touch panel to a digital signal. Thus it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the decoder circuitry of Hogdahl to have a ADC converter as taught by Klein such that the analog signal output from the digitizer can be converted into digital signal processing by the digital processor.

As to claim 2, Klein teaches the touch panel (digitizer detector) outputs an analog position signal.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Regina Liang whose telephone number is (571) 272-7693. The examiner can normally be reached on Monday-Friday from 8AM to 5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Edouard, can be reached on (571) 272-7603. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
